

## Exercise 3.2 – Passing Data to Routes

### Instructions

Complete the following:

- Using Angular CLI, create a new Angular project under week-3 and name it <yourLastName>-query-params
- Recreate the Query Params Example using your own unique messages and styling
- Requirements
  - Each component must have its own unique message
  - Add margin-top: 20px; to all components
  - Bootstrap 4 navigation
  - Each component must have differentiating unique inline styles
- Take a screenshot of your application running in a browser with working links (there should be a total of 3 screenshots, Home, User, E404)
